

SymbiosoAI ThinkTank - Top-Down Audit (UI/UX, Frontend, Backend)

Report generated: 2026-02-15 14:46 UTC

Scope

UI/UX: onboarding, navigation, debate flow, collaboration, templates, reports, billing

Frontend: routing, state, error handling, performance, accessibility

Backend: APIs, auth/RBAC, queues, integrations (Stripe, Slack, Jira), storage, observability

Data: DB schema integrity, migrations, retention, exports

Execution Notes

Audit executed against public URL: <https://symbioso-ai-v-4-12326.replit.app>

Local server on port 5050 was not reachable to the tool environment; UI walk-through and API checks were performed via the public deployment.

Screenshots captured in output/playwright: landing, simple, guided, expert, simple-after-run.

Key Findings (Summary)

- Demo login flow is ineffective in the public deployment; `/api/demo-login` returns 404 and UI remains unauthenticated.
- Auth-gated endpoints return 401 on page load, causing console errors and blocking core flows.
- Tutorial recommendations endpoint returns 500 on load.
- Permissions-Policy header emits invalid allowlist warnings in browser console.
- Start Collaborative Thinking action does not complete due to auth failures (401 on `/api/think`).

UI/UX Findings

- Demo Login button does not authenticate user; no user state update or success feedback.
- Primary action (Start Collaborative Thinking) fails silently when backend returns 401; lacks user-visible error state.
- Navigation between Simple/Guided/Expert works, but authenticated features remain inaccessible.

Frontend Findings

- Repeated 401s from /api/auth/user and tutorial endpoints during load with no UI recovery.
- Tutorial recommendations returns 500; not handled with fallback or user-facing message.
- Console warns about invalid Permissions-Policy values; indicates header configuration issues.

Backend Findings

- POST /api/demo-login returns 404 in public deployment (endpoint missing or not mounted).
- /api/tutorials/recommendations returns 500; likely missing data or unhandled exception.
- /api/think returns 401 when invoked without auth; blocks Simple mode demo flow.

Top 25 Tasks to Fix (Prioritized)

- 1. Fix demo login in production deployment (endpoint available and functional).
- 2. Ensure POST /api/demo-login is mounted for public deployments.
- 3. Repair /api/tutorials/recommendations (500) with safe fallback.
- 4. Add user-visible error states for auth/API failures.
- 5. Correct Permissions-Policy header values (camera/microphone/geolocation/payment/notifications).
- 6. Align demo login UI with backend availability (hide or disable when not available).
- 7. Unblock /api/think for demo users or allow anonymous demo flow.
- 8. Gate tutorial calls on auth state to avoid 401 spam.
- 9. Add global error boundary for frontend.
- 10. Add network error banners/toasts in core flows.
- 11. Standardize API error response shape.
- 12. Add request correlation IDs for API logs.
- 13. Add server-side error telemetry for 5xx routes.
- 14. Improve empty-state UX for reports/sessions/templates.
- 15. Document and enforce auth flow per environment.
- 16. Centralize feature flags with safe defaults.
- 17. Add rate-limit response handling in UI.
- 18. Fix Demo Login redirect/state update on success.
- 19. Harden SSE streaming with timeout feedback.
- 20. Add structured API logging for auth failures (no PII).
- 21. Add integration retry policies (Stripe/Slack/Jira).
- 22. Improve onboarding progress persistence.
- 23. Resolve billing route overlaps (/api/billing vs /api/stripe).
- 24. Add test coverage for demo login (UI + API).
- 25. Add public status/health UI tied to /health.

World-Class Recommendations

- 1. Guided first-analysis wizard to configure agents and outputs in under 60 seconds.
- 2. Workspace knowledge base with versioned docs and citations.
- 3. Evidence strength scoring for each claim and citation.
- 4. Decision log tied to debates, exports, and revisions.
- 5. Industry-specific preset templates and agent bundles.
- 6. Time-boxed debate modes (fast/standard/deep).
- 7. Quality gates before export (missing citations, weak evidence).
- 8. Real-time collaboration presence (cursor/presence) in Expert mode.
- 9. Benchmarking UI to compare model outputs over time.
- 10. Org-wide analytics dashboard with ROI and adoption metrics.
- 11. Granular sharing controls with expiring links and watermarking.
- 12. Custom agent builder with guardrails and review workflow.
